ON THE RELATION BETWEEN ELASTIC AND OPTICAL ANISOTROPY

Junzo Kasahara et al. Washington NASA Nov 1970 19 p refs Transl. into ENGLISH from Jishin (Tokyo), v. 21, 1968 p 176 187
(Contract NASw-2035)
(NASA-TT-F-13324) Avail NTIS CSCL 08G

The relationship between the elastic and the optical anisotropy was studied for silicates and a few other minerals. It was found for silicates that in the direction of the large refractive index the longitudinal wave velocity is larger and the linear compressibility is smaller, and in the direction of the small refractive index the longitudinal wave velocity is smaller and the linear compressibility is larger. This relation is represented by the empirical formula that Delta V 6/ Delta N km/s and the anisotropy on the linear compressibility is 12.5 Delta N, where Delta N is double refraction and Delta V is the value of the anisotropy on the longitudinal wave velocity. However the relationship of Delta V to Delta N is considerably different from the relationship between the mean longitudinal wave velocity and the mean optical refractive index, dV/dN 19.5 km/s.
